

ACCESSORIES

Pump-Sprayer PROTEC HSP4K

WITH METAL CONTAINER

Properties

- Metal container with a special coating on the inside
- Thread adapter with high stability, twist-locked
- Metal nozzle for perfect spray pattern, adjustable
- Optimised for the application of PROTEC fluids

Application

- Upon first use, fully close the valve, then open by approximately one turn and pump until fluid has been sucked in
- Set valve to desired spray pattern by twisting it (usually opened by approximately 1/2 turn)
- Evenly spray work-pieces from a distance of approximately 30cm
- For easy filling, we recommend using the offered drain tap for the canister

Note: one stroke with the pump enables to coat a larger area. Set the pressure accordingly during pumping. Forcefully pressing the pump lever damages the pump (hydraulic pressure).

Specifications

ID-No. / Denomination	Z003.006 / Pump-Sprayer PROTEC HSP4K Z003.007 / Pump-Sprayer PROTEC HSP4K-V, special version for PROTEC CE15V+
